Dear Ragan, Jim, Steve, and Lisa,

Attached is a list of reports of ongoing oil being released into the Gulf. There is also an enormous amount of oil laying on the seabed, and this oil as well as new oil is continuing to come ashore. Graig Mathiesen stated in a recent conversation he was going to call RRT VI to see if there is still a need for OSE II, and if there is discussing the potential use and or concurrence of OSE II. There is a woman that takes pictures almost every day of oil coming ashore in Grande Isle, and others taking pictures in Mississippi as well. I wanted to make sure you alert him there is still a great need for the Gulf to be cleaned up and restored as much as possible to pre spill conditions. I would appreciate an email letting me know the extent of your conversation.
